

When your medical  
renovation project  
demands . . .

**time and cost savings**

personal attention

**sensitive handling**

a trusting relationship

**an experienced team**

**from concept**

**to completion**

...you need  
**Colin Construction  
Company**

Keeping pace with advances in diagnostic technology is more than purchasing the latest equipment. To adapt to industry technological changes, major renovation is often necessary, usually on a limited budget, within a strict time period, in restrictive surroundings *with* a reduced building staff. Selecting the right builder is critical to the project's success.

Colin Construction Company specializes in medical facility design, renovation and remodeling. We have successfully completed modernization projects since 1982. By purposely limiting the number of projects undertaken, we maintain a high level of personal involvement. Our areas of expertise in acute care or outpatient settings include projects in:

- *Diagnostic imaging*
- *Radiation therapy*

By utilizing a core group of design consultants, Colin Construction Company can provide an extremely cost effective project plan compared to other alternatives.

**We're Part of Your Team**

Because of the massive changes in the health care industry, most medical facilities have reduced staff size. Services traditionally handled in-house now require an outside source. Colin Construction's goal is to become involved in all your renovation/remodeling projects

Robert Brown

from design to completion. We want to be part of your building team. We devote personal attention to each project we undertake, maintaining strict controls in daily operations in order to:

- *maintain completion schedule*
- *minimize cost overruns*
- *hire appropriate work crews*
- *anticipate and quickly respond to patient needs*
- *effectively contain noise, construction debris and emissions*
- *implement stringent infection control criteria*

### **Innovative Efficiency**

Submitting renovation plans for review can be the most time consuming aspect of the job. Colin Construction streamlines the process by sending simple, succinct plans. Plan review time is substantially reduced, field reviews and approvals are more likely, and construction can begin immediately.

Research for new building materials and construction methods that save time and reduce disruptions is ongoing at Colin Construction. Our aim at Colin Construction is to be pro-active.

### **Hire the Best**

Renovation projects require a builder who is a team player. A builder who stays personally involved, who hires experienced work crews that are well versed in state building and fire/life safety codes, who's sensitive

to medical environments *and* saves time and money. Colin Construction meets all those requirements.
