

## BRINGING PATIENT CARE TO A HIGHER STANDARD FOR FUTURE GENERATIONS

The team at Colin Construction Company is proud to announce completion of extensive remodel of the **Radiology Department at San Francisco General Hospital** including a new Biplane Vascular Lab, Angio/CT combo system (integral to extensive stroke invasive procedures), two 64 slice CTs, and two 1.5 short bore MRIs.

This is the first major upgrade to the facilities' diagnostic imaging department in twelve years and brings SF General up to the forefront of trauma response. Colin Construction Company's design build approach enabled this multi-phase project at an A Level 1 Trauma Center to be completed without interruption to ongoing patient service, within budget, and on time.
